## Personal Information

<b>Candidate id</b>	3296
<b>Name</b>	Muhammad bilal
<b>Date of Birth</b>	1992-12-04
<b>Salary (in USD)</b>	1500/Per Month
<b>Industry</b>	Drilling / Rig
<b>Sub Industry</b>	Rig Manager
<b>Nationality</b>	Pakistan
<b>Primary Language</b>	Hindi,
<b>Secondary Language</b>	English,
<b>Total Years of Experience</b>	11

## Additional Information

<b>Roles and Responsibilities</b>	<b>Additional Skills/Certification</b>
-----------------------------------	--

A Derrickman, also known as a derrickhand, is a key member of a drilling crew in the oil and gas industry, responsible for managing drill pipe and the mud system from a platform high above the rig floor. Their work is crucial for both the efficiency and safety of drilling operations. Key Responsibilities: Drill Pipe Handling: Derrickmen guide and handle drill pipe during tripping operations (raising and lowering the pipe), ensuring it's properly connected and disconnected, and stacked in the fingerboard or racking board. Mud System Management: They monitor and maintain the drilling fluid (mud) system, including mud pumps, mixers, and shale shakers. This involves checking mud weight (density), viscosity, and properties, as well as adding chemicals and ensuring proper circulation to cool the drill bit and remove cuttings. Rig Maintenance: Derrickmen perform routine maintenance and inspections on the derrick equipment, including greasing the crown block and checking safety equipment like fall protection harnesses. Supervision and Communication: They supervise floorhands and laborers, ensuring they understand and follow safety procedures and operational instructions from the driller. They also communicate effectively with the driller and other crew members, often via phone and camera. Safety Compliance: Derrickmen are responsible for maintaining a safe working environment, adhering to all safety protocols and using personal protective equipment (PPE) like harnesses and helmets. Equipment Operation: They may operate and maintain various drilling equipment, including diesel motors, transmissions, and other mechanical components. Troubleshooting and Repair: Derrickmen identify and troubleshoot any mechanical issues or malfunctions with the equipment, ensuring it's in optimal working condition. In essence, the derrickman is a highly skilled and physically demanding role that requires a combination of physical fitness, technical expertise, and a strong commitment to safety
