----------------------------	---------------------------------

I have extensive experience working with a wide range of rig electrical systems, including High and Low Voltage equipment, Variable Frequency Drives (VFDs), motors, generators, and various types of switchgear. My background includes ensuring reliable operation, performing preventive maintenance, and handling complex repairs to maintain safe and continuous rig operations. I am also skilled in managing power generation and distribution systems, ensuring balanced loads, stable voltage, and efficient energy usage across the rig. Throughout my career, I have been actively involved in emergency response situations, where I have demonstrated strong troubleshooting abilities by quickly identifying faults and restoring critical electrical systems under high-pressure conditions. In addition, I have contributed to multiple rig moves, commissioning, and decommissioning projects, where I performed system inspections, testing, calibration, and ensured proper electrical readiness before operations. My role has often required close coordination with multidisciplinary teams to achieve safe and smooth transitions between operational phases. I am also proficient in preparing accurate technical documentation, including daily logs, maintenance reports, equipment failure analyses, and compliance-related paperwork. This documentation helps maintain transparency, support audits, and ensure adherence to operational standards. Overall, my skills reflect a strong commitment to safety, reliability, and professional excellence in rig electrical operations
