<b>Salary (in USD)</b>	700/Per Month
<b>Industry</b>	IT
<b>Sub Industry</b>	IT - Sys Admin C Support
<b>Nationality</b>	India
<b>Primary Language</b>	English,
<b>Secondary Language</b>	Hindi,
<b>Total Years of Experience</b>	4

## Additional Information

<b>Roles and Responsibilities</b>	<b>Additional Skills/Certification</b>
-----------------------------------	--

As a Software Tester, I am responsible for ensuring the quality, functionality, and reliability of web and mobile applications throughout the development lifecycle. My role involves thoroughly understanding project requirements, designing detailed test scenarios, and writing comprehensive test cases to validate software usability, performance, and overall user experience. I execute various types of testing, including functional, regression, smoke, sanity, GUI, and cross-browser testing to ensure that every module works as intended across different environments. I perform API testing using tools like Postman, Swagger, and GraphQL to verify backend functionality, request-response accuracy, and data integrity. I also possess beginner-level experience with JMeter for load testing and Selenium WebDriver for basic automation, which helps in identifying performance bottlenecks and improving testing efficiency. During testing, I document defects clearly, track them using JIRA, and collaborate closely with developers and business teams to ensure timely resolution. Additionally, I prepare test execution reports, defect summaries, and quality status updates for the project team and stakeholders. I work within Agile methodologies, actively participating in sprint planning, daily stand-ups, and review meetings. My focus is always on delivering high-quality software by maintaining structured testing processes and continuously improving test coverage and efficiency.

Manual testing,Api testing,Automation testing,Jira,Core java,Mysql,Graphql

## Education Summary

Course	University	Passing Year	Country
B.tech	GLA	2012	India
