Operated and monitored high-pressure triplex and duplex pumps used in drilling fluid circulation, cementing operations, and wellbore fluid management. Monitored critical pump parameters such as stroke per minute (SPM), discharge pressure, suction pressure, and flow rate to ensure stable and efficient operations. Operated centrifugal booster pumps to maintain proper mud circulation and system pressure during drilling operations. Performed pump start-up, shutdown, and operational adjustments during drilling, cementing, and well cleanout activities. Assisted in nitrogen (N<sub>2</sub>) pumping operations, including monitoring pressure, flow rate, and system performance during well stimulation and pressure testing. Conducted routine inspection, troubleshooting, and preventive maintenance on pumps, compressors, valves, and associated piping systems. Identified and resolved operational issues such as pump cavitation, pressure fluctuations, overheating, and mechanical faults to maintain equipment reliability. Maintained accurate operational logs, pump performance records, and maintenance reports. Ensured strict compliance with HSE standards, safety procedures, and permit-to-work systems during all pumping operations. Coordinated with drilling engineers, supervisors, and maintenance teams to ensure safe and efficient execution of pumping activities.
