Salary (in USD)	3000/Per Month
Industry	Oilfield Services
Sub Industry	Coil Tubing
Nationality	Egypt
Primary Language	Arabic,
Secondary Language	English,
Total Years of Experience	5

Additional Information

Roles and Responsibilities	Additional Skills/Certification
-----------------------------------	--

A Pump Operator plays an important role in oilfield and cementing operations. The main responsibility of a pump operator is to operate and control pumping equipment safely and efficiently during field operations. They are responsible for preparing the pumps before the job by checking fluid levels, pressure gauges, valves, and hydraulic systems to make sure everything is working properly. During the job, the pump operator monitors pump pressure, flow rate, and equipment performance to ensure the operation runs smoothly and according to the job program. They must communicate closely with the supervisor, engineers, and other crew members to adjust pumping rates or pressure when needed. Maintaining accurate records of pumping data such as pressure, strokes, and volumes is also an important part of the job. A pump operator is also responsible for the maintenance and cleanliness of the pumping equipment. This includes performing routine inspections, identifying any mechanical problems, and reporting issues to the maintenance team. Preventive maintenance helps avoid equipment failure and ensures safe operations. Safety is a key responsibility. Pump operators must follow all safety procedures, wear proper personal protective equipment (PPE), and ensure that the work area is safe for the crew. They must also be prepared to respond quickly in case of pressure spikes, equipment malfunction, or emergency situations. Overall, a pump operator ensures that pumping operations are performed safely, efficiently, and according to company standards.

Bachelors degree in Geology Faculty of Science department of Geology Bosit course OGUK Medical offshore course Intermediate Cementing course Basic HSE &SQ Courses
