|-----------------------------------|--|

. Installation of Equipment Install new machines, devices, or systems at client sites. Ensure equipment is set up according to company and manufacturer specifications. Configure software, hardware, or network components when required. 2. Maintenance and Servicing Perform routine maintenance to keep equipment operating properly. Inspect systems regularly to detect wear, faults, or potential failures. Replace worn or defective parts. 3. Troubleshooting and Repair Diagnose technical issues using testing tools and diagnostic software. Repair or replace faulty components on-site. Ensure systems return to full operational condition. 4. Customer Support Communicate with customers to understand reported issues. Explain technical problems and solutions in simple terms. Provide guidance on proper equipment use and basic maintenance. 5. Documentation and Reporting Record service visits, repairs performed, and parts used. Complete service reports and update maintenance logs. Report recurring issues or product improvements to engineering teams. 6. Safety and Compliance Follow safety procedures and regulations while working on-site. Use proper tools and protective equipment. Ensure installations meet industry standards. 7. Travel and Scheduling Travel to different customer locations or job sites. Manage daily service schedules and respond to emergency service calls. 8. Inventory and Tools Management Maintain service tools and testing equipment. Keep track of spare parts and order replacements when needed
